📁 [Portfolio](#)

SUMMARY

- Full Stack Developer skilled in **MERN stack, JavaScript, and REST API design** with hands-on experience shipping production-grade web applications.
- Built real-time features (Socket.io), payment integrations (Razorpay), and cloud-hosted deployments with role-based access control and secure authentication systems.
- Strong foundation in **Data Structures and Algorithms using Java**, with consistent practice in optimized problem-solving and algorithmic thinking.

EDUCATION

Sage University, Indore

2023 – 2026

Bachelor of Computer Applications (BCA)

CGPA: 7.8

- Relevant Coursework: Data Structures, Database Management Systems, Operating Systems, Computer Networks, Web Development

PROJECTS

Eventify – Event Management Platform | MERN, Redis, Socket.io, Razorpay, Vercel | Code

- Architected a multi-role event booking platform (User / Organizer / Admin) serving end-to-end booking flows – from event discovery to ticket confirmation – using **React, Node.js, Express.js, and MongoDB**.
- Implemented real-time seat selection using **Socket.io** and **Redis**-based seat locking to prevent double booking, handling concurrent seat requests across multiple users without race conditions.
- Built a secure multi-provider authentication system (Google OAuth 2.0, email/phone) using **JWT, bcrypt, and HttpOnly cookies**, with token refresh and session management.
- Designed and documented **RESTful APIs** using Express.js and Mongoose with custom middleware for input validation, rate limiting, and error handling – ensuring clean separation of concerns.
- Integrated **Razorpay payment gateway** with webhook-based booking verification and **cron jobs** to auto-release expired seat holds, improving data consistency and UX.

StudyNotion – EdTech Platform | MERN, Razorpay, Cloudinary, Vercel | Live | Code

- Built an end-to-end **EdTech SaaS platform** with dual-role functionality – instructors publish and manage course content while students enroll, track progress, and access purchased media.
- Implemented secure authentication and authorization using **JWT, bcrypt, and role-based access control** with protected routes on both frontend and backend.
- Integrated **Razorpay** for course payments and **Cloudinary** for scalable media storage (video/image upload, CDN delivery).
- Developed a fully **responsive React frontend** with **Redux Toolkit** state management, supporting seamless transitions between course browsing, video playback, and checkout flows.

TECHNICAL SKILLS

Languages: JavaScript, Java

Frontend: React.js, HTML5, CSS3, Redux Toolkit

Backend: Node.js, Express.js, REST API Design, JWT, bcrypt

Databases: MongoDB, Mongoose, Redis

Tools & Platforms: Git, GitHub, Postman, Vercel, Cloudinary, npm

Concepts: DSA, OOP, Authentication & Authorization, Role-Based Access Control, WebSockets, Cron Jobs

ACHIEVEMENTS

- Solved **100+ LeetCode problems** with focus on arrays, trees, graphs, and dynamic programming – applying optimized algorithmic patterns in backend design.
- Deployed multiple full-stack applications to **Vercel and Render**, managing environment configuration, DNS setup, and production monitoring end-to-end.
- Built and shipped two complete production-level platforms (Eventify, StudyNotion) independently – covering system design, API architecture, payment integration, and frontend UI.
